Product Environmental Aspects Declaration

No. AD-15-E671
Date of publication
Sep./2/2015

EP and IJ printer (PCR-ID:AD-04)

RICOH
imagine. change.

LANIER SP 6430DN

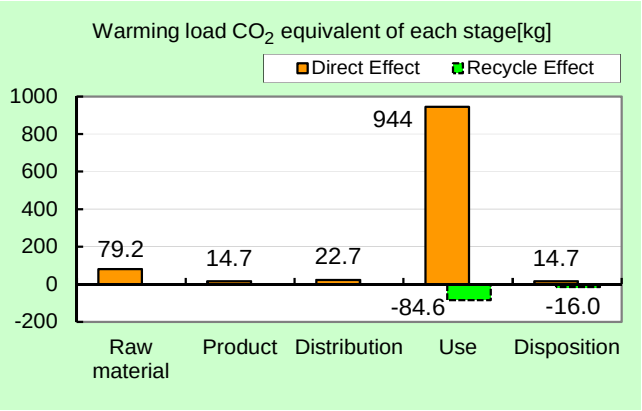
1.Printing Process : Electrophotographic (EP) Printing
2.Color : Monochrome
3.Print Speed : 38 prints/minute (LTR)
4.Maximum Paper Size : 11.7" x 17"
5.Included Units in Assessment : Automatic Duplexing Unit

Environment Contact:
RICOH Company, Ltd.
Corporate Communication Center
email : envinfo@ricoh.co.jp

The warming load of the Use stage is based on the supposition that the product prints 844,800 images for five years.

Consumption and discharge in a life cycle	All the stage sum totals
Global Warming (CO_2 equivalent)	1080kg (975kg)
Acidification (SO_2 equivalent)	1.74kg (1.59kg)
Energy resources (crude oil equivalent)	20.3GJ (17.9GJ)

※Figures in ( ) indicated environmental impact including recycle effect *note3



Notes:

1. Original LCA data is available on PEIDS: Product Environmental Information Declaration Sheet, and Product Data Sheet.
2. Unified rules and requirements for EcoLeaf LCA, for intended product category, are available as a PCR: Product Category Rule. Visit EcoLeaf website under JEMAI homepage at http://www.ecoleaf-jemai.jp/eng/ for details.
3. Recycle Effect illustrates an indirect influence to other products/services.
4. Basic Units used for calculations are based on Japan domestic data at this time, due to a lack of base data to establish localized Basic Unit for overseas locations adequately.
5. This declaration was produced using Product Category Rule intended for a product model sold in the Japanese market and using the qualitative and quantitative data collected in Japan.

[Supplemental environmental information]

・Certified regulations: International Energy Star Program, EU RoHS.
・This product and its main components such as photoreceptor and toner are produced in our factories certified to ISO14001 management system standard.

PCR review was conducted by: PCR Deliberation Committee, January 01, 2008, Name of reprentative: Youji Uchiyama, University of Tsukuba, Graduate School
Independent verification of the declaration and data, according to ISO14025 ☐internal ■external
Third party verifier: Shozo Nakamuta *

Programme operator: Japan Environmental Management Association for Industry, ecoleaf@jemai.or.jp

* In the case of an business entity certified as an Ecoleaf-data-collection system, the names of certification auditors are written.

The EcoLeaf is an environmental labeling program that belongs to the ISO-Type Ⅲ category.

[Notes for readers: EcoLeaf common rules]

I. Stage related

A. "Production" stage is intended for two sub-stages listed below.

(1) "Raw material" production: consists of mining, transportation and raw material production.

(2) "Product" production: consists of the parts processing, assembly and installation.

B. "Distribution" stage is intended for transportation of produced product. Transportation of consumables and maintenance goods (e.g. replacement parts) for use of the product are included into "Use" stage.

C. "Use" stage is intended for use of the product (active mode, standby mode, etc.) and production, transportation to disposal/recycle of consumables/maintenance goods (e.g. replacement parts).

D. "Disposition/Recycle" stage is intended for environmental impacts by product disposition/recycle, and deduction by recycling (e.g. impact reduction of raw material production).

E. "Recycle Effect" illustrates an indirect environmental influences to other products/services by use of reclaimed materials/parts, and/or by supply of used products to other businesses for material reclaim/parts reuse.

Case 1: Use of reclaimed materials/parts: Sum of increase of environmental impact by collection activities of used materials/parts, and decrease by volume reduction of used materials/parts.

Case 2: Supply of used products to other businesses for material reclaim/parts reuse: Sum of increase of environmental impact by materials/parts reclaiming process, and decrease by volume reduction of new materials/parts production.

II. Inventory analyses

A. Data of mineral ore on "Exhaustible resources" are presented in weight of pure ingredients (e.g. iron, aluminum) in the ore.

B. Data on energy resources are presented based on origin in calorific value. e.g. Data on uranium ore presents weight of uranium concentrate, which is available for use as an atomic fuel.

C. Data of discharge to water system are in actual figure (not calculated using unit function in inventory analyses).

III Impact analyses

Result of the "Impact analyses" is found in converting results of inventory analyses into total amount of a reference material (e.g. CO_2 in case of "Global Warming").

A. Impact "by resource consumption" represents magnitude of impacts to resource depletion.

B. Impact "by emission/discharge to environment" represents magnitude of impacts to Atmosphere, Water and Soil system.

IV Data entry format

A. Exponential notation, after the decimal point to two, should be used.

B. Indicate "0" instead exponential notation, if the result of calculation or estimation is considered as "zero" or negligible in comparison to related results.

C. Indicate " — " if calculation nor estimation can not be done, in order to differentiate to indicate "zero".

(BGD for material production are for production from mineral ore. Those data do not include reclaiming processes like recovery from scrap.)

[Notes for readers: Target product specific]

This declaration was produced using Product Category Rule intended for a product model sold in the Japanese market and using the qualitative and quantitative data collected in Japan.

Form 3(F-03s-02)

Product data sheet

(Input data and parameters for LCA)

Document control no.	F-03s-02
Product vendor	RICOH COMPANY, LTD.
EcoLEaf registration no.	AD-15-E671

PCR name	EP and IJ printer (PCR-ID : AD-04)	Product type	LANIER SP 6430DN					
LCA/LCIA in units of:	1 product	Product weight (kg)	20.4	Package (kg)	5.1	Weight total (kg)	25.5	

1. Product information (per unit): parts etc. by material and by process/assembly method

	Breakdown of primary materials				Math breakdown of parts, which need to apply Processing / Assembly Base Units (Parts B, C)			
	Material name	Weight (kg)	Material name	Weight (kg)	Process name	Weight (kg)	Process name	Weight (kg)
Product	Stainless steel	1.49E-01	Electronic circuit board	1.58E-01	Press molding: Iron (kg)	8.68E+00	Parts assembly (kg)	2.12E+01
	Aluminum	1.55E-01	Ordinary steel	8.51E+00	Press molding: Nonferrous metal (kg)	9.66E-01

92	Diesel truck : 4 ton	Transportation
93	Diesel truck : 10 ton	
95	Diesel truck : 20 ton	
96	Freight by rail	
97	Freight by ship	
99	Electricity	Electric Power and Fuel
103	Gasoline as fuel	
107	Furnace urban gas (13A)	
109	Furnace LNG	
125	Industrial water	Utility (Water)
126	Clean water	
129	Shredding	Disposal and Recycling (Crushing and Sorting)
130	Sorting : Iron (by magnetic force)	
131	Sorting : Nonferrous metal (by eddy current with wind force)	
132	Sorting : Plastics (by relative density difference in water)	
133	Incineration to landfill (as ash)	Disposal and Recycling (Incineration and Landfill)
134	Incineration : Industrial waste	
136	Landfill: General waste	
137	Landfill : Industrial waste	
138	Recycle : to cold-rolled steel	Disposal and Recycling (Regeneration)
139	Recycle : to copper plate	
140	Recycle : to Aluminum plate	
141	Recycle : to Thermoplastic pellet	
145	Recycle : to Glass	
146	Sewage processing	Disposal and Recycling (Other)
