

# Product Environmental Aspects Declaration

EP and IJ printer (PCR-ID:AD-04)

No. AD-17-E933

Date of publication  
Jun./13/2017

## MP C3504exSP TE

【 Part # 417988 】

1. **Printing Process** : Electrophotography (EP)
2. **Color** : Monochrome and Full-color
3. **Print Speed** : 35 prints/minute ( Letter / A4 )
4. **Maximum Paper Size** : 12" x 18"
5. **Functions included in LCA** : Single-pass Document Feeder, Automatic Duplexing Unit

Use stage conditions:

Period of use : 5 years, Amount of use : 729,600 pages

※ The warming load of the use stage does not include environmental impact originated from printing paper, as specified in the PCR.

Environment Contact:  
RICOH Company, Ltd.  
Corporate Communication Center  
email : envinfo@ricoh.co.jp

| Consumption and discharge in a life cycle   | All the stage sum totals |
|---|--------------------------|
| Global Warming (CO <sub>2</sub> equivalent) | 1230kg (958kg)           |
| Acidification (SO <sub>2</sub> equivalent)  | 2.11kg (1.78kg)          |
| Energy resources (crude oil equivalent)     | 23.3GJ (17.6GJ)          |

※Figures in ( ) indicated environmental impact including recycle effect  
\*note3

Notes:

1. Original LCA data is available on PEIDS: Product Environmental Information Declaration Sheet, and Product Data Sheet.
2. Unified rules and requirements for EcoLeaf LCA, for intended product category, are available as a PCR: Product Category Rule. Visit EcoLeaf website under JEMAI homepage at <http://www.ecoleaf-jemai.jp/eng/> for details.
3. Recycle Effect illustrates an indirect influence to other products/services.
4. Basic Units used for calculations are based on Japan domestic data at this time, due to a lack of base data to establish localized Basic Unit for overseas locations adequately.
5. This declaration was produced using Product Category Rule intended for a product model sold in the Japanese market and using the qualitative and quantitative data collected in Japan.

**[Supplemental environmental information]**

- Certified regulations: International Energy Star Program, EU RoHS.
- This product and its main components such as photoreceptor, toner, and carrier are produced in our factories certified to ISO14001 management system standard.

PCR review was conducted by: PCR Deliberation Committee, January 01, 2008, Name of representative: Youji Uchiyama, University of Tsukuba, Graduate School

Independent verification of the declaration and data, according to ISO14025  internal  external

Third party verifier \* : Kazuo Naito, system certification auditor

Programme operator: Japan Environmental Management Association for Industry, [ecoleaf@jemai.or.jp](mailto:ecoleaf@jemai.or.jp)

\* In the case of an business entity certified as an Ecoleaf-data-collection system, the names of certification auditors are written.

[Notes for readers: EcoLeaf common rules]

## I. Stage related

A. "Production" stage is intended for two sub-stages listed below.

- "Raw material" production: consists of mining, transportation and raw material production.
- "Product" production: consists of the parts processing, assembly and installation.

B. "Distribution" stage is intended for transportation of produced product. Transportation of consumables and maintenance goods (e.g. replacement parts) for use of the product are included into "Use" stage.

C. "Use" stage is intended for use of the product (active mode, standby mode, etc.) and production, transportation to disposal/recycle of consumables/maintenance goods (e.g. replacement parts).

D. "Disposition/Recycle" stage is intended for environmental impacts by product disposition/recycle, and deduction by recycling (e.g. impact reduction of raw material production).

E. "Recycle Effect" illustrates an indirect environmental influences to other products/services by use of reclaimed materials/parts, and/or by supply of used products to other businesses for material reclaim/parts reuse.

- Case 1: Use of reclaimed materials/parts: Sum of increase of environmental impact by collection activities of used materials/parts, and decrease by volume reduction of used materials/parts.  
Case 2: Supply of used products to other businesses for material reclaim/parts reuse: Sum of increase of environmental impact by materials/parts reclaiming process, and decrease by volume reduction of new materials/parts production.

## II. Inventory analyses

A. Data of mineral ore on "Exhaustible resources" are presented in weight of pure ingredients (e.g. iron, aluminum) in the ore.

B. Data on energy resources are presented based on origin in calorific value. e.g. Data on uranium ore presents weight of uranium concentrate, which is available for use as an atomic fuel.

C. Data of discharge to water system are in actual figure (not calculated using unit function in inventory analyses).

## III. Impact analyses

Result of the "Impact analyses" is found in converting results of inventory analyses into total amount of a reference material (e.g. CO<sub>2</sub> in case of "Global Warming").

A. Impact "by resource consumption" represents magnitude of impacts to resource depletion.

B. Impact "by emission/discharge to environment" represents magnitude of impacts to Atmosphere, Water and Soil system.

## IV. Data entry format

A. Exponential notation, after the decimal point to two, should be used.

B. Indicate "0" instead exponential notation, if the result of calculation or estimation is considered as "zero" or negligible in comparison to related results.

C. Indicate "-" if calculation nor estimation can not be done, in order to differentiate to indicate "zero".

(BGD for material production are for production from mineral ore. Those data do not include reclaiming processes like recovery from scrap.)

[Notes for readers: Target product specific]

This declaration was produced using Product Category Rule intended for a product model sold in the Japanese market and using the qualitative and quantitative data collected in Japan.
